Question:

How can I clone an iPod (i.e., create a copy of it using another iPod)?

Answer:

Connect both iPods to your computer and start JakPod. Now use "Backup/Cloning->Clone iPod to iPod". Select the source and target iPod and start the cloning process

You can configure a couple of options related to cloning. See "File->Options->Cloning" for details.

Warning! All data existing on the target iPod before cloning will be lost!
